

Concepts of science, technology, engineering, art & math have long defined our existence in this world.

These essential skills have provided the foundation for all the developments that have since followed.

What is PaleoTechnology?

First ways humans have modified their environment to create what they need.

By learning these skills, we can get more in touch with our roots and our place in the natural world.

It can be difficult for students to visualize how early humans lived. Working with our hands brings the experience to life & gives participants a base upon which to build a deeper understanding of the past.

Tamara Wilder
has been practicing, teaching & demonstrating ancient living skills since 1989.
